

PowerFlare® Bicycle Taillight Safety System Protection from all angles ...

Invented by a police officer, the **PowerFlare®** Safety Light is an ultra-rugged, ultra-bright safety light. Visible for miles and strong enough to withstand being run over by a fire truck, the **PowerFlare®** unit can be attached to your bike, giving you true 360 degree protection. Unlike other bike lights, our system provides visibility to the *sides* of your bike, making you visible to drivers.

This is critical, since most crashes occur when a car drives into the side of the bike ("T-bone," side-swipe or broadside crash). Whether you're a serious cyclist or just biking for fun, you deserve the superior all-angles protection that our unique product provides.

There is just no comparison to the little "flashers" that are out there now. Only the **PowerFlare®** bike light can give you peace of mind with true 360° visibility.

- ❑ **Superior Visibility & Safety:** Super-bright LED light array can be seen for miles.
- ❑ **Easy to Use:** The unit has 9 user-selectable patterns, allowing you to pick the one right for conditions. Clip on to seat, backpack, saddlebag with carabineer.
- ❑ **Durable & Reliable:** Can withstand demanding road conditions (also waterproof). Great on the street or the toughest mountain bike courses. No alkaline batteries to fail. Can run for over 100 hours per CR123 lithium battery. Rechargeable version available.
- ❑ **Versatile:** The same unit can be used for camping or even as a rescue signal if you get lost in the woods.
